

JNCAA Monthly Global Newsletter -2019- January.

Introduction.

Welcome to the January newsletter. In this edition we highlight a recent JNCAA training bootcamp. We also layout the various changes on the horizon. We feature a blog post by our Vice President of Product Line Management for Security, in which she breakdowns the key skills she has found invaluable over her career.

As always, we have various **Open enrollment events** on offer. We encourage your students to take advantage of these sessions for a chance to obtain a free JNCIA-JUNOS certification.

Carleton University JNCIA Cloud/Junos Bootcamp.

We recently ran a training Bootcamp in conjunction with the Center of Excellence in Next Generation Networks (CENGN) at Carleton University. The 44 students that participated had a choice of the JNCIA-Cloud and JNCIA-Junos training pathways, and the opportunity to sit the corresponding certification exam.

This event typified the JNCAA's mission of bridging the gap between higher education and industry, through providing industry relevant training and connecting student with career opportunities.

Juniper Networks Cloud and Automation Academy (JNCAA)

We've decided to rebrand the Academic Alliance Program, in keeping with where we are heading as a company and as the education services arm of Juniper.

Members may have noticed the addition of curriculum that reflects this change. We believe these subjects will be of the greatest interest and value to students and faculty going forward. However, we will continue to offer members all the same materials and services we previously had available.

More information about the changes will follow in due course, and members will begin to see the changes reflected in our content and website over the coming weeks.

The Year Ahead.

We would like to take this opportunity to thank all our members that actively participated in the program over the previous year.

In 2019 we will continue to improve and expand our program to offer our membership the most current and applicable training, and to do so in ways that are flexible, immersive, and convenient to faculty and students alike.

In the next few months we will expand our offerings to include a new course called Introduction to Junos Security (IJSEC). This will join our other associate level courses and certifications available to our membership and provide a broad-based introduction to network security that we believe will better serve the needs of undergraduate

networking, engineering, and computer science students. Like our other associate level courses, IJSEC will be available online with a cloud-based lab environment hosted by Juniper, with the additional option to teach the course locally if you so choose. We will have details on this course in the next few newsletters, but please let us know if you might be interested in learning more about this course or scheduling an On-Demand training in IJSEC now.

Juniper Networks Virtual Lab Services

Our Members have access to several virtualized “hands-on” labs services that are designed to allow them to learn about Juniper’s product and solution functionality.

These lab services are aimed at audiences who may wish to explore a new product or solution, a specific technology or functionality with or across products, or who are looking to test new configurations or incremental features on top of systems that they already have deployed. For more information on how to access this service visit <https://jlab.juniper.net/home/>

[Blog: Seizing the Opportunity.](#)

The start of the year is usually accompanied with an abundance of new year resolutions, and vows of “new year, new me”. Whether you plan to eat better, go for a promotion or finally get the Juniper certification, there are several key skills that will make your goals more achievable. Hence, we have chosen to highlight this Juniper blog post, which is particularly apt as we make our plans for 2019. [Link](#)

New Members

We are delighted to welcome several new members to the Program:

- Metropolitan State University (St Paul, USA).
- London Metropolitan University (London, UK).
- Liverpool Hope University (Liverpool, UK).
- Amity University (Noida, India).
- Ecole Nationale d'Ingénieurs de Sousse (Sousse, Tunisia).
- Escuela Superior Politecnica de Chimborazo (Riobamba, Ecuador).

Open Enrollment Events

Every month, we have open enrollment learning events for our JNCAA students. Obtaining a JNCIA-JUNOS certificate is a great way to kick off the year and get ahead on your new year resolutions. Students can sign up via

the advertised links, create an account, and register for the course. In the week prior to the event, they will receive their login details and information about the On-Demand platform. After each event, the students who complete the course requirements will receive a free certification voucher.

Would you like to reserve a private On-Demand Training event? [Let us know!](#)

Date	Content	Location	Country
03/02-09/02	JNCIA- Junos	JNCAA On-Demand Boot Camp incl. Labs - Link	Open Event
10/02-16/02	JNCIA- Junos	JNCAA On-Demand Boot Camp incl. Labs - Link	Open Event
17/02-23/02	JNCIA- Junos	JNCAA On-Demand Boot Camp incl. Labs - Link	Open Event

JNCAA Program Updates and Roadmap

We are continuously looking for ways to improve our Academic Program offerings.

As it stands, the following deliverables are set for deployment:

- 2019 H1 - Release of the JNCIS-Cloud On-Demand Training option for JNCAA
- 2019 H1 - Release of the JNCIS-DevOps On-Demand Training option for JNCAA
